PROFESSIONAL SUMMARY

AI-focused **Senior Software Engineer** at RBC who builds and **evaluates LLM workflows** and **agentic systems** for financial products. Led **AI-assisted development** adoption across **40 engineers**, cutting cycle time **40%**.

SKILLS

- **AI & LLMs:** LLM evaluation, prompt and context engineering, RAG, agentic workflows, LangChain, OpenAI/Anthropic APIs, MCP
- **AI Tools:** Claude Code, Codex, Cursor, GitHub Copilot, Amazon CodeWhisperer, Devin
- **Programming & ML:** Python, scikit-learn, SQL, TypeScript, JavaScript, Java, predictive modelling, model calibration
- **Frameworks & Infrastructure:** FastAPI, Pydantic, React, Angular, Node.js, REST, GraphQL, Docker, GitHub Actions, CI/CD

EXPERIENCE

Senior Software Engineer, Royal Bank of Canada — Jan 2026 – Present

- Used **AI to plan and architect** an end-to-end **assisted-discovery epic** (guided questions that help clients open the right **investment account**), delivering it **2 months early**.
- Led **AI-assisted development** adoption across **40 engineers** (Cursor, automated test generation, CI **evaluation** gates), cutting cycle time **40%**.
- Evaluated early **GitHub Copilot** and **CodeWhisperer**: compared output accuracy, flagged issues, gave usability feedback.
- Built production apps on a platform serving **1.5M+ concurrent users** and **Kafka** integrations processing **500K+ events/day** for fraud and risk **ML** systems.
- Built **AI-assisted chatbot** and self-service interfaces on REST/GraphQL APIs, using GenAI for debugging, code-quality analysis, and test automation.
- Built **observability dashboards** and **anomaly detection** to monitor API performance and catch production issues early.
- Partnered with UX, QA, and business stakeholders to turn requirements into shipped features and **mentored** engineers on testing, API design, and secure coding.

Founding AI Engineer, CYK.LIFE & JNWRLD — Jan 2026 – Present

- Built and launched **two commerce platforms** (Angular, Node.js, Supabase, **Stripe**), owning architecture through deployment.
- Integrated **Codex** into dev, testing, and docs workflows, cutting delivery time **80%**.
- Built internal tools after **diagnosing team workflows** (applicant review, scheduling, inventory), saving **~10 hrs/week**.
- Shipped interactive apps and games with **200K+ impressions** and **$5K revenue** across five drops.

Software Engineer, Royal Bank of Canada — Jul 2023 – Dec 2025

- Optimised a mortgage renewal app (**50K+ users**) with React, TypeScript, GraphQL, and code-splitting.
- Built reusable React/Angular components for **7,000+ developers**, reducing duplicated code **40%.**

AI & ML PROJECTS

Automated FX Pricing Analytics POC | **Python**, scikit-learn, FastAPI, Docker | GitHub | Live Demo

- Built a pricing tool recommending bid/ask spreads from **fill probability**, expected P&L, and adverse-selection cost.
- Trained on **50K synthetic RFQs** (**0.789 ROC-AUC**, **0.176 Brier**); optimiser over 14 spreads lifted expected P&L **49.3%** in synthetic backtests.

MCP Model Serving POC | **Python**, FastAPI, Pydantic, MCP, pytest | GitHub | Live Demo

- Built a **FastAPI** serving layer with Pydantic validation, API-key auth, health checks, and pytest coverage.
- Exposed predictions as an **MCP tool** so AI agents and compatible clients can call the model.

EDUCATION

Bachelor of Computer Science (Honours), Wilfrid Laurier University — Sep 2019 – Jun 2023
