Essé Ogbaran

Relocating to London, UK | Irish Citizen - No UK visa sponsorship required
Ogbarane@gmail.com | +1 289 489 9308 | linkedin.com/in/essé-ogbaran | Portfolio

SKILLS

- **Languages:** JavaScript/TypeScript, HTML5, CSS/SCSS, Java, Spring Boot, Python, SQL, Go basics
- **Backend & APIs:** CIAM and SaaS access-management flows, REST and GraphQL API integration, OAuth/OpenID Connect/JWT, micro-frontend architecture, Java/Spring Boot and Node/Express services, Apollo Client, client-side caching, pagination, secure API communication
- **Frameworks:** React.js, Angular, Next.js, Redux/Context API, Node.js, Express.js, FastAPI, Spring Boot, Tailwind CSS, Styled Components
- **Data & AI:** PostgreSQL, MongoDB, SQL/NoSQL, JavaScript data layers, Adobe Analytics, Adobe Launch, LLM APIs, prompt engineering, AI-assisted development workflows, anomaly detection, MCP
- **DevOps & Testing:** GitHub Actions CI/CD, Azure DevOps, Agile/Scrum, Jest, Jasmine, Cypress, Lighthouse, Docker, Dynatrace, Splunk dashboards, Chrome DevTools, Charles Proxy, OWASP, HashiCorp Vault

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Royal Bank of Canada | Toronto, ON. *January 2026 – Present*

- Design and develop adaptable enterprise web applications and micro-frontend UI modules using TypeScript, React/Angular, HTML, CSS/SCSS, and secure access-management patterns for business-critical banking journeys.
- Built reusable UI components, hooks, and state-driven flows for SPAs, integrating REST and GraphQL APIs across front-end modules, Java/Spring Boot middleware, third-party services, and MongoDB models.
- Implemented OAuth/JWT authentication flows, token/session handling, secure API communication, retry policies, centralized error handling, and clear failure states for customer-facing SaaS application journeys.
- Applied secure coding and OWASP-aware practices by protecting endpoints with OAuth2/JWT, externalizing secrets through HashiCorp Vault, and supporting secure access to enterprise applications.
- Created automated test coverage with Jest, Jasmine, Cypress, Mockito, WireMock, and JaCoCo for reusable components, API integrations, backend services, and release validation.
- Implemented analytics and observability workflows using dashboards, data layers, and anomaly detection to monitor user journeys, application health, API performance, and production issues.
- Collaborated with UX/UI, QA, business, and engineering stakeholders to translate designs and requirements into responsive, accessible web components across desktop, tablet, and mobile experiences.
- Developed AI-assisted chatbot and self-service support interfaces integrated with REST/GraphQL APIs, using GenAI-assisted debugging, code-quality analysis, and automated testing to improve delivery speed.
- Mentor engineers on documented code, reusable component patterns, secure coding, OWASP practices, API design, testing standards, and root-cause analysis.

Software Engineer | Royal Bank of Canada | Toronto, ON. *July 2023 – December 2025*

- Engineered optimizations for a mortgage renewal SPA serving 50,000+ users, using GraphQL, TypeScript, code-splitting, lazy loading, caching, and performance analysis to reduce bottlenecks.
- Designed reusable React/Angular component libraries and design-system patterns used by 7,000+ developers, reducing redundant code by 40% and standardizing responsive, accessible UI delivery.

Automations Analyst | Royal Bank of Canada | Toronto, ON *May 2022 – August 2022*

- Developed automation workflows using Blue Prism, REST APIs, and SQL, analyzing process logic and data flows to reduce high-volume Foreign Cash Services processing time by 80%.

Technical Systems Analyst | Royal Bank of Canada | Toronto, ON *May 2021 – August 2021*

- Served as frontline triage for enterprise Webex incidents, investigating root causes, communicating with distributed users, and resolving an average of 12 user-impacting issues per day.

EDUCATION

Bachelor of Computer Science, Honours | Wilfrid Laurier University *September 2019 – June 2023*

- Cindy Colvin Women in Computer Science Scholarship
- Fashion Tech Hackathon: Winner — Connected Community Challenge, Best Use of Virtual Fashion, Best Domain

Career Accelerator Program: Secure Coding | University of Waterloo *October 2024 – February 2025*

- Completed training in Secure SDLC methodologies and automated vulnerability scanning using CodeQL
